

*This is an advanced Drug IQ Test compiled by the Do It Now Foundation, in addition to another entitled the "Comprehensive Drug Knowledge Test." If you consider yourself knowledgeable in the area of street dope, here is your chance to test exactly how much you really know. Answers will be found at the end of the test. Ready? Go!*

- Three drugs closely chemically related to STP are
  - PCP, MDA and Atropine
  - MDA, Mescaline and Muscarine
  - DMA, Amphetamine and MDA
- The fastest-acting barbiturate with the shortest duration is
  - Amobarbital
  - Secobarbital
  - Phenobarbital
- The cheapest AND most accurate method of street drug analysis is generally considered to be
  - Reagent solution
  - Mass Spectrometer
  - Thin layer chromatography
- The mushroom which has the greatest potential for accidental overdose when ingested as a psychedelic is
  - Amanita Muscaria
  - Stropharia Cubensis
  - Psilocybe
- Which of the following does *not* contain belladonna alkaloids?
  - Contact
  - Jimson Weed
  - Lophophora Williamsii
- Which of the following possible cutting agents of street Cocaine can be the most deadly if injected?
  - Lidocaine
  - Benzocaine
  - Tetracaine
- Next to Heroin, which of the following is considered to be the second largest drug problem in the large New York-to-Washington, D.C. Metropolitan areas?
  - Barbiturates
  - Methadone
  - Garbage Psychedelics

- Which of the following is deadly when ingested in moderate amounts?
  - Chloral Hydrates
  - Ethyl Alcohol
  - Methyl Alcohol
- In the vast majority of cases, "mescaline" sold in the U.S. is
  - LSD
  - LSD-PCP
  - Peyote derivative
- In what country are datura seeds containing atropine most commonly mixed with marijuana?
  - Mexico
  - India
  - Southeast Asia
- Which of these is *not* a common side effect of phencyclidine, better known as PCP?
  - Extreme paranoia and inability to cope with an emergency
  - Nervousness, nausea and vomiting
  - Deadening of limbs due to anaesthetic qualities
- Which chemical group has the most unpredictable cross-potential (synergistic) effect when mixed with alcohol?
  - Methaqualone
  - Barbiturates
  - MAO inhibitors
- Which is the nation's number one drug killer?
  - Barbiturates
  - Alcohol
  - Heroin
- In larger cities, the number of bum trips reported to free clinics and hot lines has declined in the last two years. Why is this?
  - More psychedelics are pure
  - People are more afraid of seeking help
  - More people have learned how to handle bummers themselves
- A moderately effective type of "opium" drug can be made from
  - The coca plant
  - Lettuce
  - Mint leaves and parsley

- For certain types of people, which of the following drugs can be the most physically dangerous?
  - Aspirin
  - Marijuana
  - Green tea
- What are "sopors"?
  - Methaqualone
  - Amyl Nitrate
  - Drugs which make you feel "soapy"
- In times of an abundance of marijuana, what is most likely to happen?
  - There is a similar increase in use of pills
  - There is a general decrease in use of harder drugs
  - Nothing much changes
- What is the principal danger in ingesting Morning Glory seeds that have been commercially packaged?
  - An overdose is possible
  - Sickness and vomiting is possible due to poisonous coating of the seeds
  - In some seeds, the lysergic compound has been neutralized
- Most cheap Mexican Reds contain
  - Strychnine
  - Secobarbital
  - Pentobarbital Sodium
- Amphetamine psychedelics are
  - Psychedelics cut with lots of speed
  - Drugs like MDA and DMA
  - Amphetamines which cause hallucinations when taken in large amounts
- Say somehow you find real mescaline, and you get sick. This reaction was most probably caused by
  - Real mescaline
  - Impurities added to the drug
  - Mis-synthesis of the drug
- What is actually in an average dose of LSD?
  - 250 - 500 micrograms
  - 100 - 250 micrograms
  - 25 - 75 micrograms

24. What is the minimum dosage required for synthetic mescaline?
- 500 - 1000 micrograms
  - 500 - 1000 milligrams
  - 300 - 500 milligrams
25. What is the easiest way to avoid accidentally killing yourself?
- Don't take barbiturates
  - Don't mix your drugs
  - Don't eat any chemical without knowing for sure what's in it

### SCORING GUIDE

As you can imagine, missing a lot of the questions could be disastrous if you are now working with the drugs in question. We hope you will find out all the answers before getting burned, ripped off, or having to handle an emergency situation.

This test wasn't designed to be all that easy. Consequently, if you only missed 5 questions, you should consider yourself fairly well informed about street dope. If you missed from 6 to 10, you've still got a lot to learn. Read up on other Do It Now publications as a starter particularly "Street Drug Survival", a quarterly newsletter with all the latest street dope info.

If you missed 11-15, that's terrible! You've really got a lot to learn. Missing 16-24 is even worse, but should at least show you how far you have yet to go. If you're in this last category, copies of *Conscientious Guide to Drug Abuse* (\$1), and *Facts About Commonly Used Drugs* (\$1.25) would be in order. Have a talk with your local drug hotline or free clinic! Read an underground newspaper!

**ANSWERS:** 1 (c), 2 (b), 3 (c), 4 (a), 5 (c). — Lophophora Williamsii is better known as the peyote cactus. 6 (c) — All can be dangerous, but OD deaths have been reported with Tetracaine. Shooting street coke is not ever advisable considering possible adulterants. 7 (b) — Barbiturates run a close third, however. 8 (c). 9 (a) — LSD-PCP is also found, but not nearly as frequently. 10 (b), 11 (b), 12 (c), 13 (b) — By a wide margin. 14 (c), 15 (b), 16 (a), 17 (a), 18 (b) — This decrease is noted particularly among younger kids who use downers and whites. 19 (b), 20 (b), 21 (b), 22 (a). — The most common reaction to real mescaline is nausea and vomiting, followed by a good trip. However, chances of finding real mescaline in the last four years has been almost impossible. 23 (c), 24 (c), 25 (c) — It's a good idea all around — we need you alive and well!
